How can I create multipart rar file in Linux using the official console rar client?

RAR 3.90 Copyright (c) 1993-2009 Alexander Roshal 16 Aug 2009
Shareware version Type RAR -? for help

I want a multipart rar with each part size being 150 MB.

linux

command-line

rar

Why use RAR? There are a lot of other file formats out there, ones that people don't file lawsuits over and are still widely used in 2010, like 7z, tgz, zip. – digitxp Sep 4 '10 at 4:07

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

OK, I have asked this question for 7zip, too. Please help! superuser.com/questions/184557/... – [hopeseekr](#) Sep 4 '10 at 4:36

```
rar a -v153600k <name-of-archive-file> <files-to-compressed>
```

will create 150Mb multipart rar archives

Personally, I'd use 7zip or bzip2 than rar, but that's my opinion
